

DROPSpec — Deposition Raster Open Print Spec

This page exists to be ripped. It carries text at several sizes, a rule, a table with flat tints, and a gradient strip, so that a rendered proof shows whether swaths land where *passes.csv* says they do.

Why the structure is the spec

Everything that would otherwise be a header field is structural: 1-bit means screening already happened; per-pen means nozzle-space; per-pass means the pass structure **is** the file layout; gcode in the same container means motion and bitmaps cannot desync. Not underspecified. Decided.

Field	Purpose	Tint	Darker
ROWS	Nozzles per column	50%	75%
COLUMNS	Fire events in this pass	50%	75%
DIR	XPOS or XNEG	50%	75%

Stitch target

The horizontal rules below sit at roughly half-inch intervals, which is where band boundaries fall on a four-pen gang with a half-inch pen pitch.

8pt 10pt 14pt 20pt 28pt
